

FEATURING

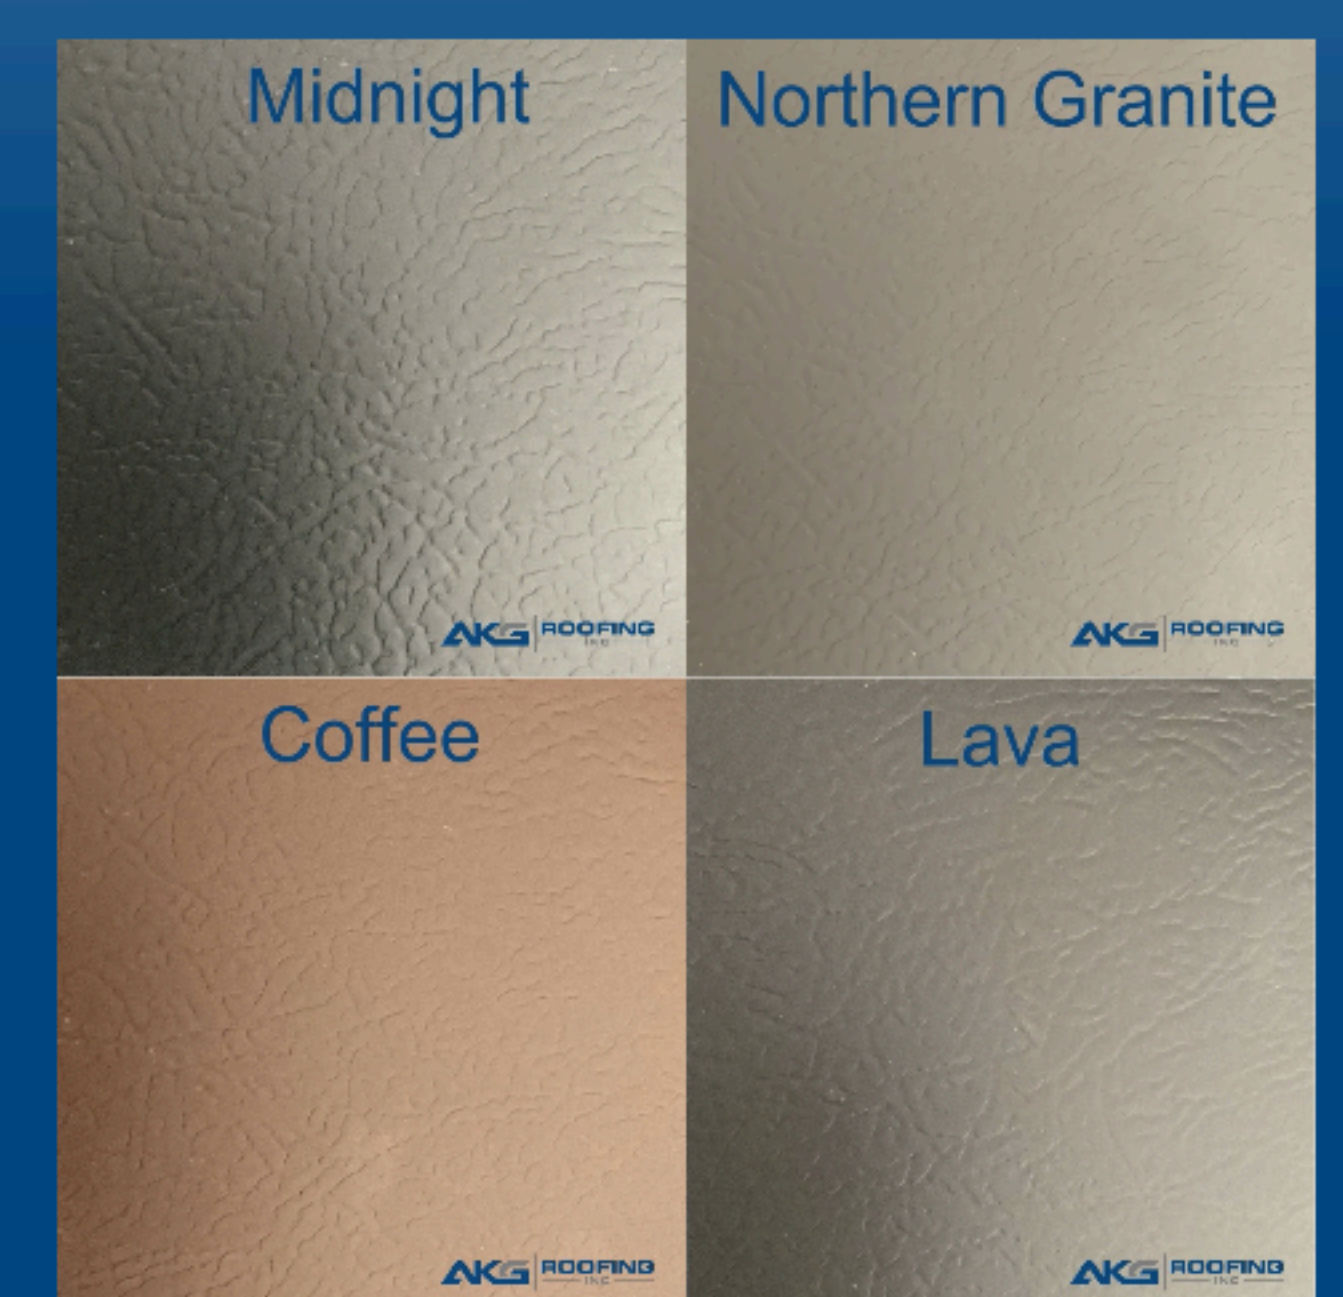

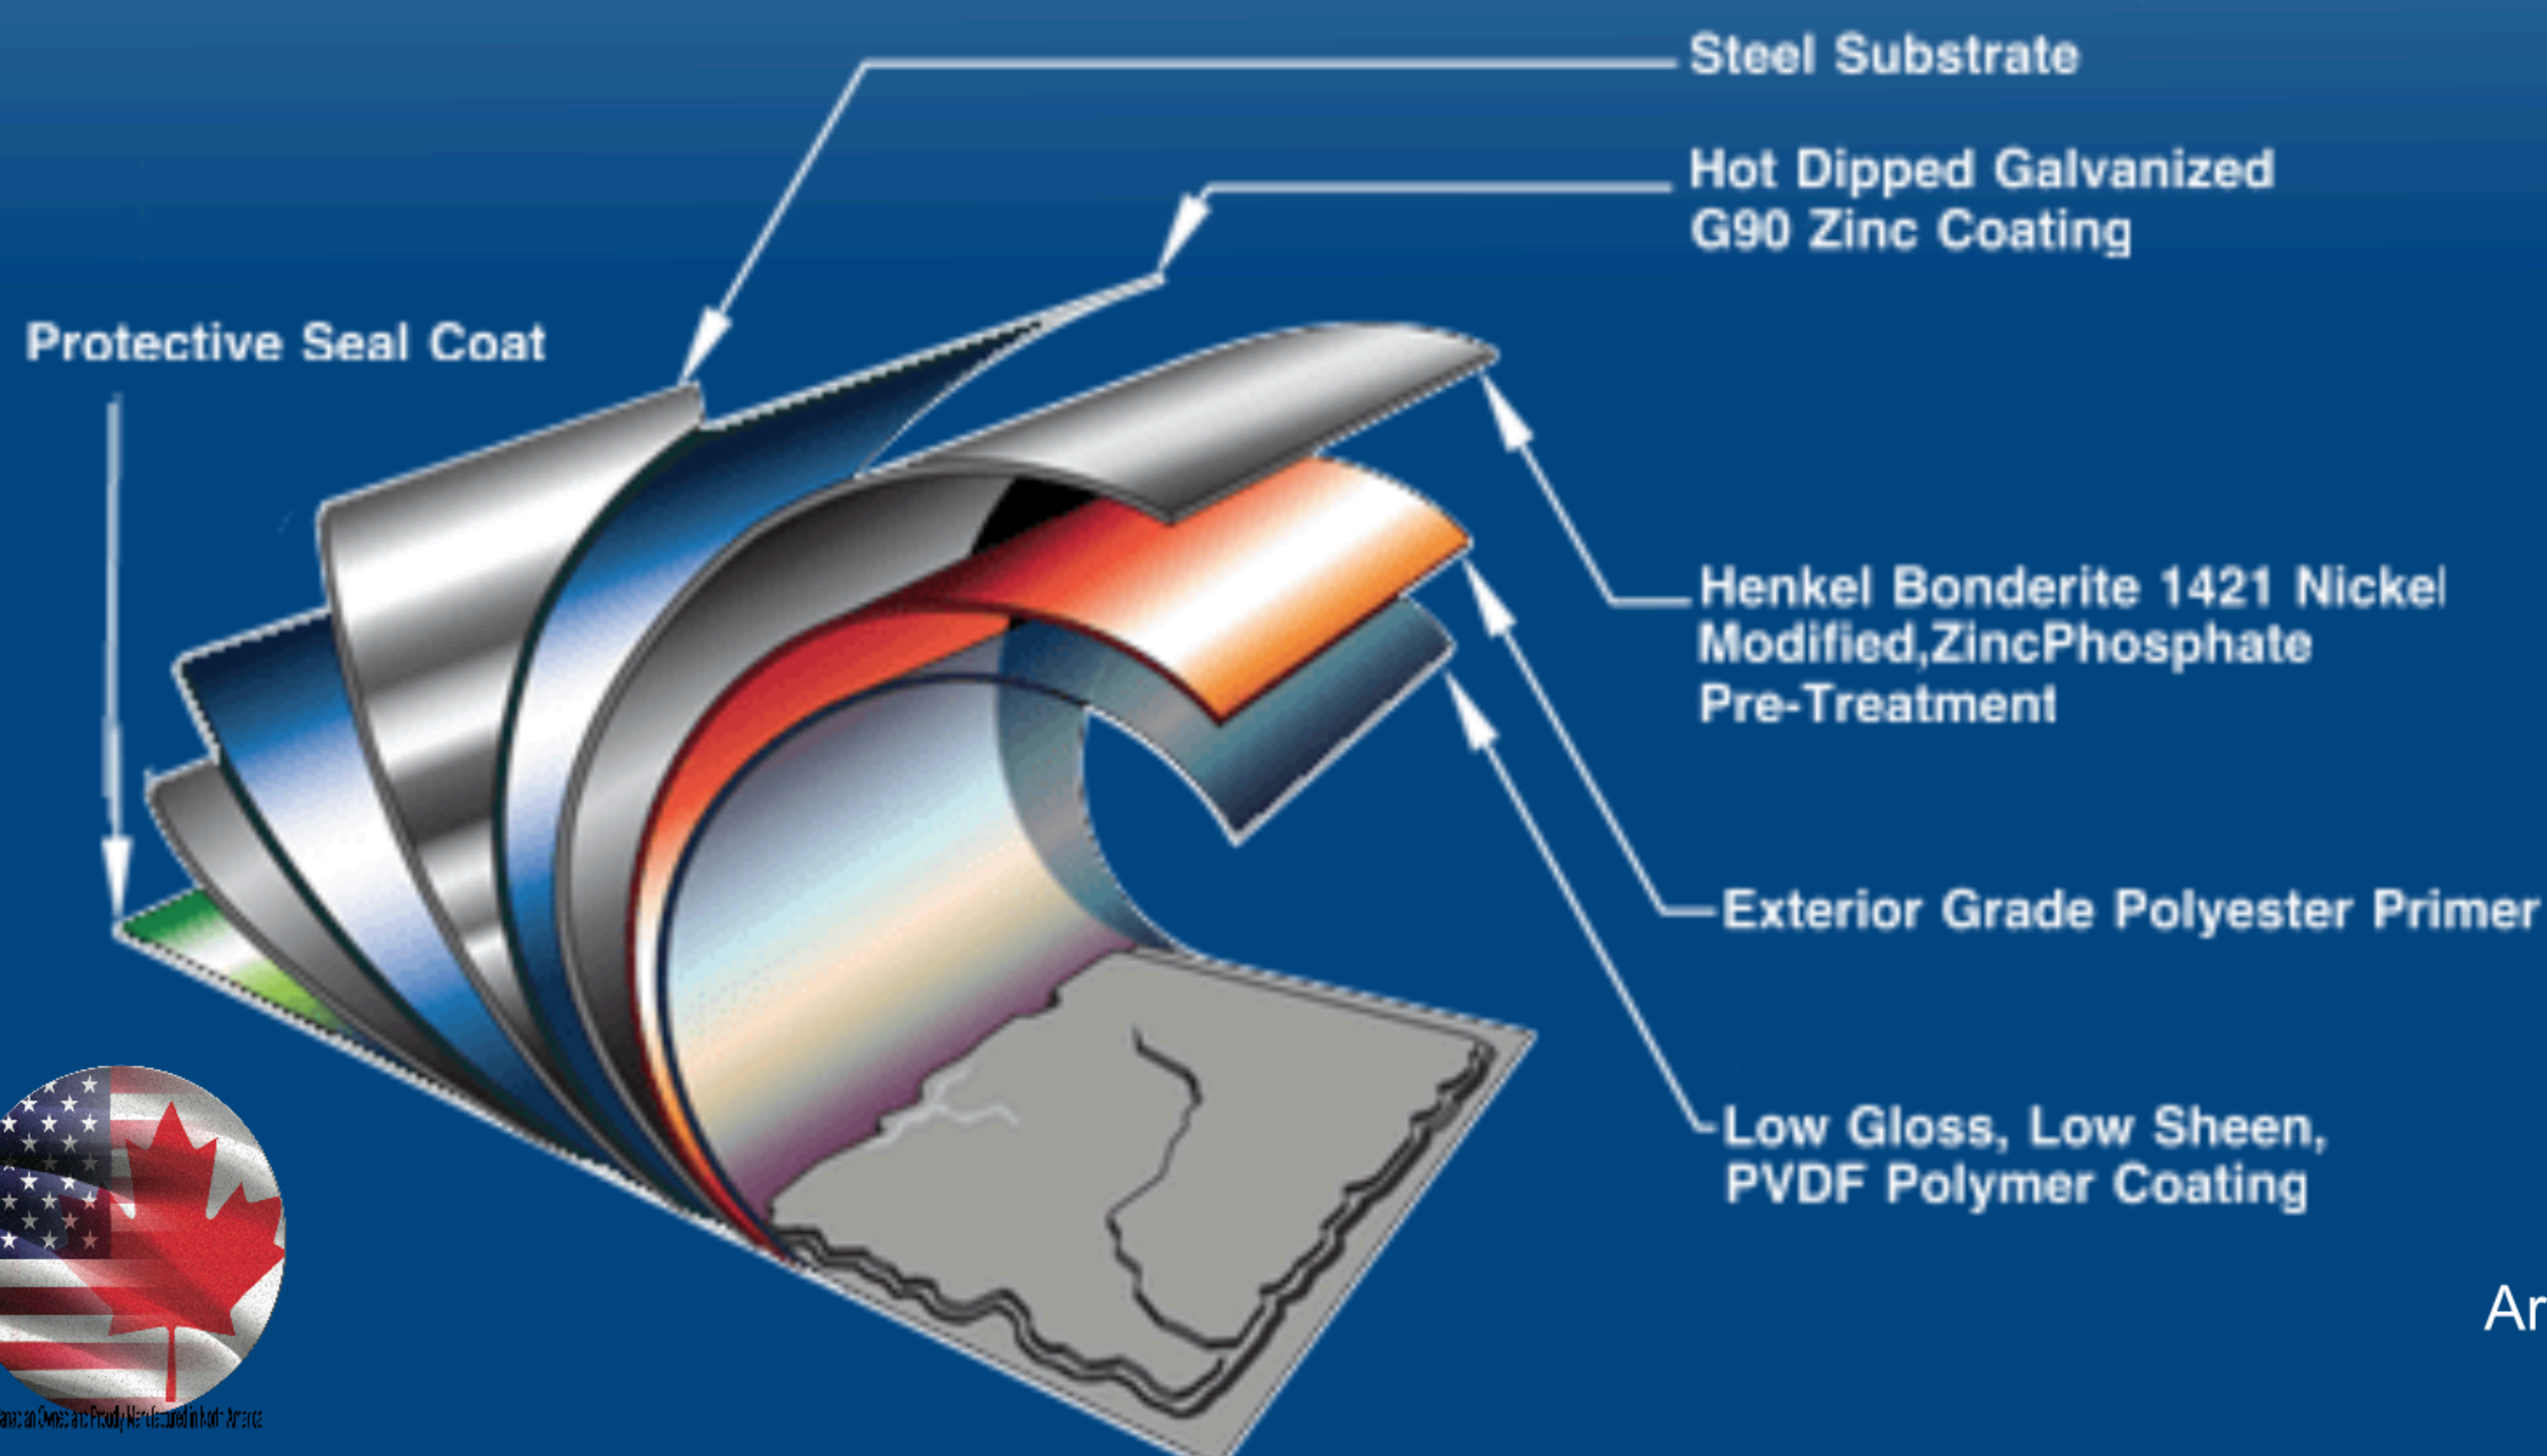

- Industry Leading 26 Gauge Steel Sub-straight
- KYNAR 500 PVDF, Metal Coating Process
- COOL Roof, ENERGY STAR Rated Pigment Finishes
- Double Embossed Metal Stamping Process
- Floating Clip, Hidden Fastener System
- Four Way Interlocking Panel Design
- Direct To Deck Sound Reduction Design
- Large 50" x 12" Panel Size

PREMIERE METAL ROOFING SYSTEM

Modelled after Traditional Cedar Roof Shakes or the popular real Slate Shingle, one of the most historically used roofing materials, in many areas of the world. This Premiere Metal Roofing System holds traditional beauty and elegance while adding the value of being near maintenance free for the life of your home.

The attention to detail is achieved through the double embossing manufacturing process that is done in Toronto Canada. From the elegant look of the chiseled leading edges of the Slate style panels, to the defined natural look of the cedar Shake style panel, This system is designed to bring out the Architectural beauty of your home.

Fortify your investment with the solid and timeless design of our metal system. The increased reflectivity of the Cool roof technology used in the coating system, coupled with the increased radiant barrier, that the steel provides, your homes energy bills will reflect a positive improvement.
